

Fugabella Color

The new Resina-cemento hybrid technology from Kerakoll.

The Fugabella Color project sprang from architects' and interior designers' need for seamless ceramic surfaces requiring unobtrusive joints. Resina-cemento is made exclusively from pure, natural binders, totally free from Portlandite and from soluble salts and lime, giving a superb surface finish. The special, mainly mineral pigments give an unprecedented depth of colour and allow us to offer a timelessly elegant range of environmentally friendly grouts available in 50 of the most refined contemporary colours.

From delicate neutrals to gentle pastel colours, from rich, intense shades to the deepest tones: each of the 50 colours in the collection has been designed with care for maximum aesthetic effect.

Fugabella Color, a new range of grouts offering unparalleled technical and aesthetic performances.

A complete range for the perfectly coordinated decoration and finishing of all tiled ceramic, mosaic, and natural stone surfaces.

→ 50 design colours for grouting of ceramic, porcelain tiles, mosaic and natural stone

→ Chromatic uniformity and absence of salt efflorescences

→ Reduced absorption and staining

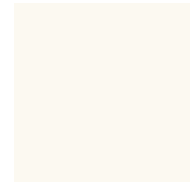

Fugabella Color

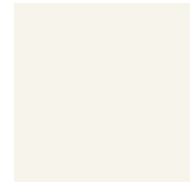

Decorative Resina-cemento (resin-cement) for grouting of ceramic and porcelain tiles, mosaic and natural stone in a 50-colour design range.

50 design colours

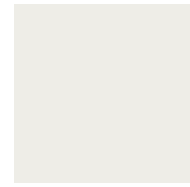

Color - the new colour project for the decorative grouting of tiles, mosaics and natural stone and the co-ordinated sealing of floors, bathroom fittings and shower cubicles.
